

Web Portal - Productivity Features and Advanced User Tools

The primary user interface (besides the IP phone) for OneStream Networks end-users is the Web Portal. This browser interface will feel familiar from first glance. It not only gives on-screen control of the phone but also makes it simple for end-users to take advantage of many productivity and mobility capabilities of OneStream Networks. From the time-saving, click-to-dial feature to visual voicemail and "find-me-forwarding" tools, the Web Portal brings functionality to end-users both in the office and at remote locations wherever there is internet access.

Visual Voicemail

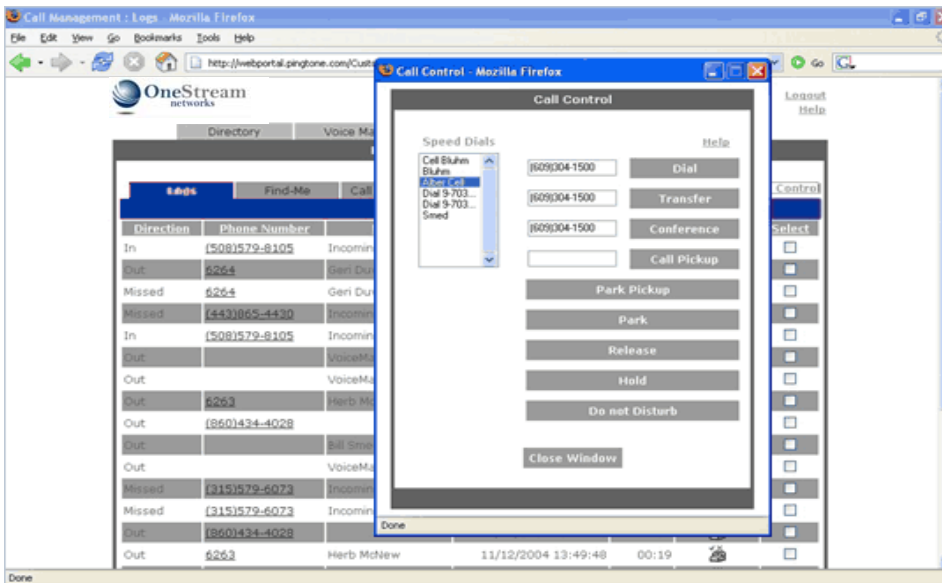

View and Play – See, play, forward, distribute, and callback voicemail messages.

Unified Mailbox – Unify Voicemail and Email by sending Voicemail to any Email.

One Number Presence

Integrate All Devices – One number presence allows you to be reached at the Office, Cell, PDA and Home.

Find-Me-Forwarding – Program all calls or caller IDs to ring at any device anywhere in the world.

Advanced Conferencing

Meet-Me Conference – Schedule and manage 7+ user audio conferences.

Ad-Hoc Conference – One click adds users to established conference calls.

Microsoft® Outlook® Integration

Contact Dialing – TAPI compatible phone dialing directly from Outlook Contacts.

Contacts Import – Import Contacts to Web Portal directly from Outlook.

Screen-Pop Call Assistant

Call Prompt – Incoming calls pop a small window in corner of screen.

Call Control – Click to answer, send to VM, hold, or call later.

Directory

Corporate – View and one-click call, send voicemail, or conference any corporate user.

Personal – Import, add, and one-click call, conference, or screen personal contacts.

Call Management

Call Log – See and sort all incoming and outgoing phone calls.

Call Screening – Screen and route individual calls based on caller ID.

Forwarding – Forward always, when busy, or when no answer.
