

### Move to IP communications at your own pace

SmartPipe, the industry's first on-demand intelligent IP service, connects your company to the future via OneStream's next-generation secure IP network. The multi-service MPLS IP backbone allows your company to subscribe to just the services needed today. And, as your business grows and changes, SmartPipe saves you money and time by quickly and cost-effectively adding applications without overhauling your equipment infrastructure, network and wide area network (WAN) connectivity.

### MPLS and OneStream Networks - the backbone of your business

With SmartPipe, your company can achieve more for less cost while improving performance, security and reliability. The global MPLS (multi-protocol label switching)-based IP network core provides the intelligence and capacity necessary to dynamically manage multiple classes of service (COS) while preserving security and optimizing bandwidth utilization.

### SmartPipe Service Options

- 1.5Mbps Dedicated Internet Access (DIA)
- MPLS-based IPVPN multiple site networking
- Dynamic IP Trunking (legacy PBX lines/trunks)
  - Local Number Portability (keep you current phone numbers)
  - Long Distance and Toll-Free calling (as low as \$.02 per minute)
- Hosted IP Telephony (VoIP)

For example, start with specially priced 1.5Mbps Dedicated Internet Access (DIA). When ready, enable multiple sites for data, site-to-site calling and Internet using SmartPipe's MPLS-based data VPN. Then, add IP trunks/lines to your company's PBX/key systems to reduce costs for local and long distance calling. Or, for greater productivity and savings, migrate your company's legacy telephony infrastructure to OneStream's hosted PBX service.

### SmartPipe Transport Options

- T1 or Multiple T1 (NxT1) – bonded or redundant
- T3 with flexible, scalable bandwidth subscription
- Fast Ethernet

With multiple, fully managed transport options, over 400 worldwide points-of-presence (POPs) and world-class monitoring/management, your company can flexibly scale to any size, connect any location and add any application all through one partner, OneStream Networks.

### OneStream Networks Deployment Services

OneStream Networks maintains fully certified Cisco Systems and Linksys engineers, technicians and project managers to assist in the design, installation and support of your company's new SmartPipe network.

### Support and Quality Assurance

OneStream Networks is a leader in designing, deploying, and supporting high-performance IP networks. With a world-class IP network, best-practice 24/7 monitoring, on-site support, and a passion for exceeding customer expectations, OneStream Networks is a partner you can rely on both today and into the future for all your communications needs.

### Why OneStream Networks?

The business world is fast becoming IP-centric, forcing organizations to evaluate their readiness to move to a single converged network. In the future, how well an organization achieves convergence will determine its profitability and potentially even its survival. At the same time, companies are faced with the delicate balancing act of managing the inevitable transition to converged IP while continuing to support their business.

The key to overcoming these challenges is the right partner. OneStream's flexible portfolio of connectivity and managed services is well suited to meet the unique needs of every organization. Furthermore, OneStream's deep IP expertise and proven convergence experience provide the insight and assistance to ensure success.

OneStream Networks can help you understand the benefits of convergence, assess the business challenges it addresses and help you develop an effective, all-encompassing strategy to harness the power of convergence.
