## **OneStream Networks Global SIP Trunking Solution Now Rated “Avaya Compliant”**

- *Global SIP Trunking Service is compatible with key Avaya IP telephony, unified communications and security solutions.*
- *Helps large businesses and enterprises to achieve the full scalability, flexibility and cost savings of IP communications.*

FOR IMMEDIATE RELEASE: Tuesday, June 14, 2011

Rochester, NY — OneStream Networks, a leading global managed IP services provider, today announced that its Global SIP Trunking Service is compliant with key Internet protocol (IP) telephony solutions from Avaya Inc., a global leader in business collaboration systems, software and services.

Global SIP Trunking service allows businesses to consolidate worldwide voice services onto existing or new private MPLS IP connections, resulting in dramatic cost savings and enhanced feature access without sacrificing quality, reliability, security or calling features.

OneStream Networks Global SIP Trunking uses Session Initiation Protocol signaling and a native IP-based facility to manage all voice traffic between a customer's Avaya Aura® SIP network, the OneStream Networks IP network, and the Public Switched Telephone Network. This converged service enables greater efficiencies by eliminating the need for businesses to manage multiple vendors at multiple sites with multiple access facilities and offers the following enhanced features provided with the advanced technology of the Avaya Aura Session Manager core:

- Global local numbers and number portability
- Network flexibility via OneStream MPLS or existing MPLS
- Unlimited, zero-cost site-to-site coordinated dial plan
- Consolidated long distance and Toll Free services
- Geographic diversity and network failover
- Web-based service management

The application is now compliance-tested by Avaya for compatibility with Avaya Aura® Communication Manager, Avaya Aura® Session Manager, and Acme Packet 3800 Net-Net Session Border Controller.

“By aligning ourselves with leading technology partners like Avaya, OneStream Networks can help enterprise customers unlock the full potential of their Avaya unified communications and network investment,” states Trey Smith, President OneStream Networks. “Our joint commitment to technical compliance and flexible, standards-based platforms enables the reliable and cost-effective integration of call processing, unified communications, messaging, presence and mobility in an integrated platform. These elements combine to unify and enhance the enterprise communications experience, regardless of location or device. We’re pleased this partnership will benefit current and future customers with their IP communications needs.”

OneStream Networks is a member of the Avaya DevConnect program—an initiative to develop, market and sell innovative third-party products that interoperate with Avaya technology and extend the value of a company’s investment in its network.

As a Gold member of the program, OneStream Networks is eligible to submit products for compatibility testing by the Avaya Solution Interoperability and Test Lab. There, a team of Avaya engineers develops a comprehensive test plan for each application to verify whether it is Avaya compliant. Doing so ensures businesses can confidently add best-in-class capabilities to their network without having to replace their existing infrastructure—speeding deployment of new applications and reducing both network complexity and implementation costs.

"Companies like OneStream Networks are expanding the choices available to Avaya customers," said Eric Rossman, vice president, developer relations, Avaya. "With a global selection of standards-based solutions that are compliance-tested for interoperability, businesses can better align technology with the needs of the business; enabling critical business processes, changing the way they work and uncovering new value that contributes to the bottom line."

### **About Avaya**

Avaya is a global leader in business collaboration systems. The company provides unified communications, contact centers, data solutions and related services directly and through its channel partners to leading businesses and organizations around the world. Enterprises of all sizes depend on Avaya for state-of-the-art communications that improve efficiency, collaboration, customer service and competitiveness.
