

Site-to-Site Data IP VPN

Take advantage of prioritized data delivered over a private, secure global IP backbone. Eliminate expensive under-performing legacy networks like Frame Relay, Point-to-Point T1s, and ATM with cost-effective MPLS-based IP circuits. MPLS-based IP VPN services allow your business to cost-effectively prioritize and transfer voice, video and data between main facilities, remote offices, extranet partners and remote users.

Hosted IP Telephony

OneStream Networks' offers a suite of managed IP telephony services delivered with end-to-end Quality of Service (QoS) over a MPLS-based IP backbone. Instead of investing capital into a new PBX and Voicemail system, your business may elect to simply enable voice services over a carefully engineered LAN and WAN. OneStream Networks will design, implement, and manage a hosted IP telephony system for your business using best-in-class equipment from Cisco Systems.

Benefits include:

- Reduced Total Cost of Ownership (TCO) of 20%-40% versus a premise-based PBX system.
- Reduced capital investment.
- Seamless voice and data integration for multiple locations.
- 3, 4 or 5 digit extension dialing.
- Presence management, centralized voice mail, auto attendant, and voice mail to email integration.

IP Trunking – Local and Long Distance

Reduce costs and improve manageability by eliminating multiple-provider copper and T1/PRI trunk services with cost-effective IP Trunk services from OneStream Networks. Voice over IP technology over a Quality of Service (QoS) IP backbone allows your business to enjoy the following benefits:

- Toll-quality local and long distance voice services at aggressive rates.
- No-cost interoffice calling.
- 4 or 5 digit Coordinated Dial Plan.
- Direct Inward Dial (DID) Services.

Enhanced ACD Services

On-demand, advanced ACD contact center applications that are hosted within the OneStream Networks IP backbone. Significantly enhance your customer contact experience, boost agent productivity, and improve overall profitability. Features include interactive (self-service) voice response (IVR), skills-based (ACD) routing, database integration (CTI), inbound/ outbound call blending, remote agent and multi-site support, web-based administration, a wide range of management reporting, monitoring and recording options, and more.

Collaboration Services

OneStream Networks offers a robust suite of multimedia applications including:

- Web Collaboration with Desktop Video.
- Meet-Me-Conferencing.
- Business-class Email.
- File and Calendar Sharing.
- Hosted IVR and Speech Recognition.

Dedicated Internet Access (DIA)

Take advantage of Tier 1 Dedicated Internet Access (DIA) either as a stand-alone T1, NxT1, or DS3 service or as part of a converged IP VPN service. Benefits include access to a global, redundant network combined with the high-performance of OneStream's Tier 1 backbone.

Collocation and Hosting Services

Locate your server(s) in OneStream Networks data facilities and take advantage of Tier 1 Internet connections, redundant power, ultra-high security and disaster protection.

- Web and DNS Hosting.
- Common and Private Collocation.
- Secure Data Back-up.

IP Video Conferencing

Enable on-demand, flexible video conference services through the OneStream Networks. Eliminate expensive usage-based ISDN BRI services with cost-effective IP Video services from OneStream Networks.

Why OneStream Networks?

The business world is fast becoming IP-centric, forcing organizations to evaluate their readiness to move to a single converged network. In the future, how well an organization achieves convergence will determine its profitability and potentially even its survival. At the same time, companies are faced with the delicate balancing act of managing the inevitable transition to converged IP while continuing to support their business.

The key to overcoming these challenges is the right partner. OneStream's flexible portfolio of connectivity and managed services is well suited to meet the unique needs of every organization. Furthermore, OneStream's deep IP expertise and proven convergence experience provide the insight and assistance to ensure success.

OneStream Networks can help you understand the benefits of convergence, assess the business challenges it addresses and help you develop an effective, all-encompassing strategy to harness the power of convergence.
