Hosted PBX and UC Advantages

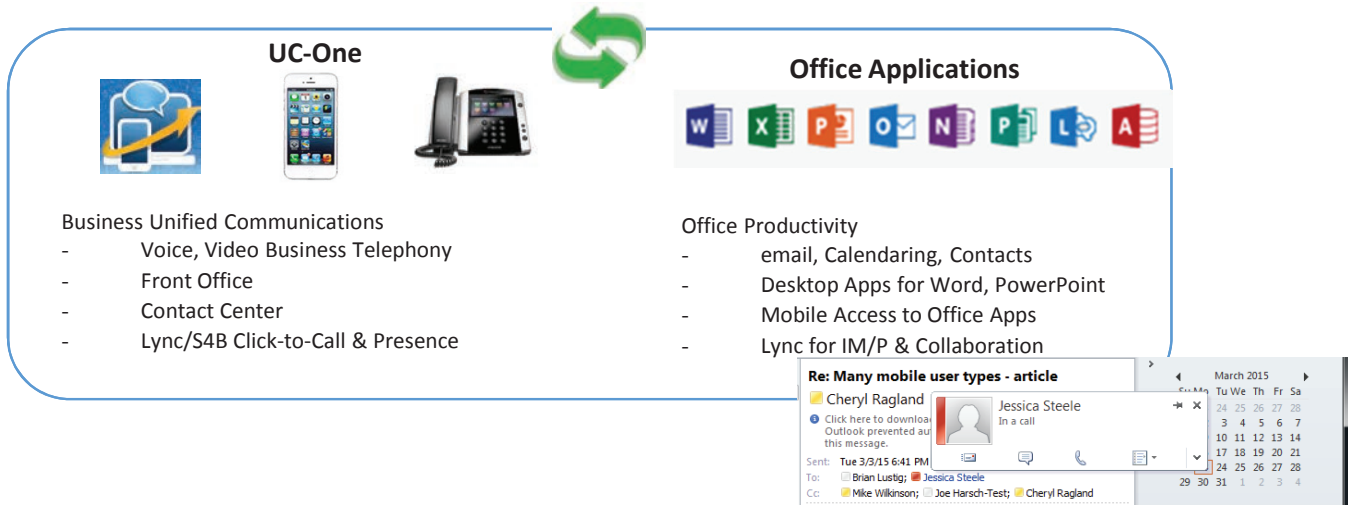

- Scalable fully-managed flexible solution that grows as your business evolves
- Unified comms without complexity and capital expense of a new phone system
- Business continuity design for zero-outage communications
- Simple web-based management for user and admin control
- Reduce operating expenses with an all-inclusive service bundles
- Avoid technology obsolescence – simply add features and services on-demand
- Flexible network options including 3rd-party MPLS and public Internet
- UC-One collaboration, IM, video conferencing, Presence and desktop sharing
- Mobility solution to extend service access beyond the desk.

Unified Communications – UC-One

UC-One integrates with Lync and Skype for Business to deliver enterprise-grade video and telephony via an integrated softphone and a desk phone.

Microsoft-based UC functions can continue within Lync/Skype for Business—but UC-One enables calling any phone in the world seamlessly from within Office 365 apps, web pages and from within Lync or Skype for Business.

And, for your smartphone, UC-One’s MobileLink client complements the Skype for Business mobile client by allowing you to make and receive calls to any phone on the public network with Shared Call Appearance.

Global Availability

Wherever you go, we’re already there...

OneStream Networks extends your reach and functionality by offering local numbers (DID/DDI), portability (LNP) and Toll Free services in over 80 countries and 8,000 cities worldwide*. With global availability, your business can easily consolidate services, reduce costs and simplify expansion with a single-vendor solution.
